1 Zones & Firewalls

Here is the order of zones, per firewall, from most important to less important. Of course, some zones could be inverted. As long as you explained your idea, this is fine¹. However, for everyone to have the same base from now on, you will use the following order:

- FW1: z-mail-ssh > z-http > z-public (> z-Internet)²
- FW2: z-lweb > z-u1 >³ z-u2 > z-all-sandwich
- FW3: z-nfs > z-u3 > z-ssh

¹And, of course, as long as it makes sense and is correct

²No need to include the Internet zone because what comes from/goes to there implies zones already considered.

³Even if z-u1 and z-u2 could be inverted, we will keep this order for next steps
